## Deminder Software Architecture Document

Version <1.0>

*[To customize automatic fields in Microsoft Word (which display a gray background when selected), select File>Properties and replace the Title, Subject and Company fields with the appropriate information for this document. After closing the dialog, automatic fields may be updated throughout the document by selecting Edit>Select All (or Ctrl-A) and pressing F9, or simply click on the field and press F9. This must be done separately for Headers and Footers. Alt-F9 will toggle between displaying the field names and the field contents. See Word help for more information on working with fields.]*

# Software Architecture Document

## 1. Introduction

### 1.1 Purpose

This document provides a comprehensive architectural overview of the system, using a number of different architectural views to depict different aspects of the system. It is intended to capture and convey the significant architectural decisions which have been made on the system.

### 1.2 Scope

This document describes the architecture of the Deminder project.

### 1.3 Definitions, Acronyms, and Abbreviations

Abbreviation	Description
N.A.	Not Applicable
MVC	Model View Controller
UC	Use case

### 1.4 References

Title	Date	Publishing organization
<a href="#">UC Add deadline</a>	22/10/2018	Deminder Team
<a href="#">UC Manage deadline</a>	01/11/2018	Deminder Team
<a href="#">UC Add subtask</a>	01/11/2018	Deminder Team
<a href="#">UC Manage subtask</a>	01/11/2018	Deminder Team
<a href="#">UC Show deadline list</a>	01/11/2018	Deminder Team
<a href="#">icalendar</a>	29/11/2018	Wikipedia

### 1.5 Overview

This document contains an overview of the architecture of the software Deminder.

## 2. Architectural Representation

We develop an Android App which uses MVC pattern.

Deminder	Version: <1.0>
Software Architecture Document	Date: 29/11/2018

### 3. Architectural Goals and Constraints

There is no server used in our app (yet), so there's only a client side which uses **MVC**. Our View displays deadlines which can be managed by the User. It is written in **Java** and uses the **icalendar format** for storing the deadlines.

#### MVC

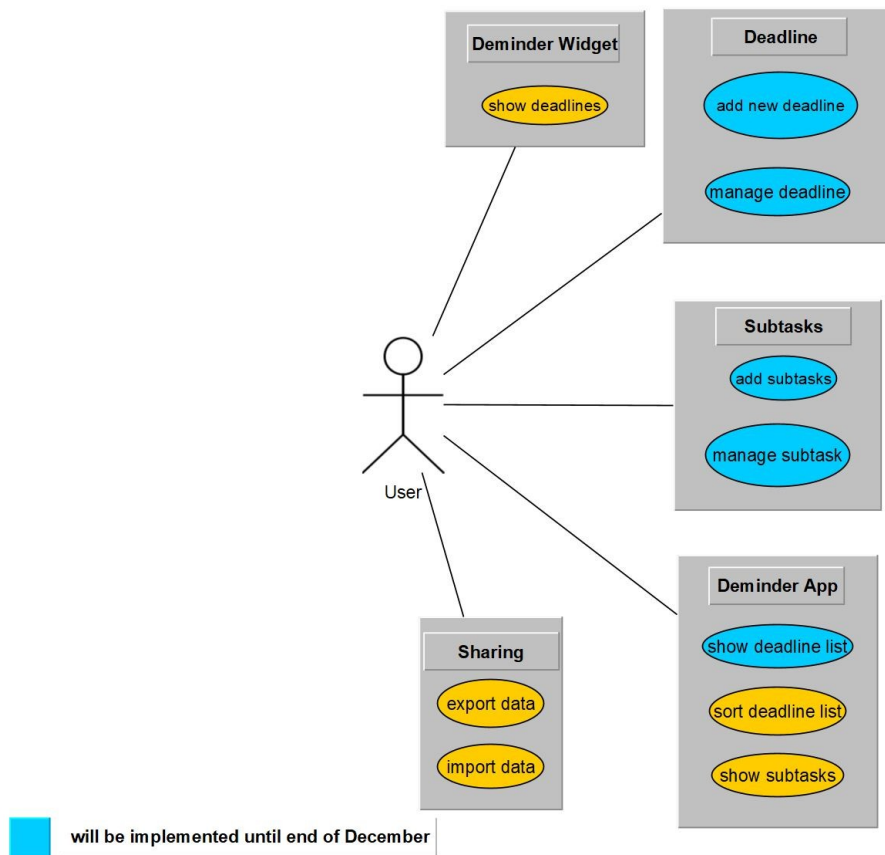

The main goal of the MVC architecture is to separate the view from the logic. The controller takes care of handling actions by the user and telling View or Model, that there were actions performed that concern them. Models contain the data that is displayed in the views.

#### Data Storage

There is no database use. Instead of that, the data is stored in the icalendar format on the phone drive. The icalendar format (.ics) is the current standard for saving appointments and tasks. The files may be reused in different calendar or todo apps.

## 4. Use-Case View

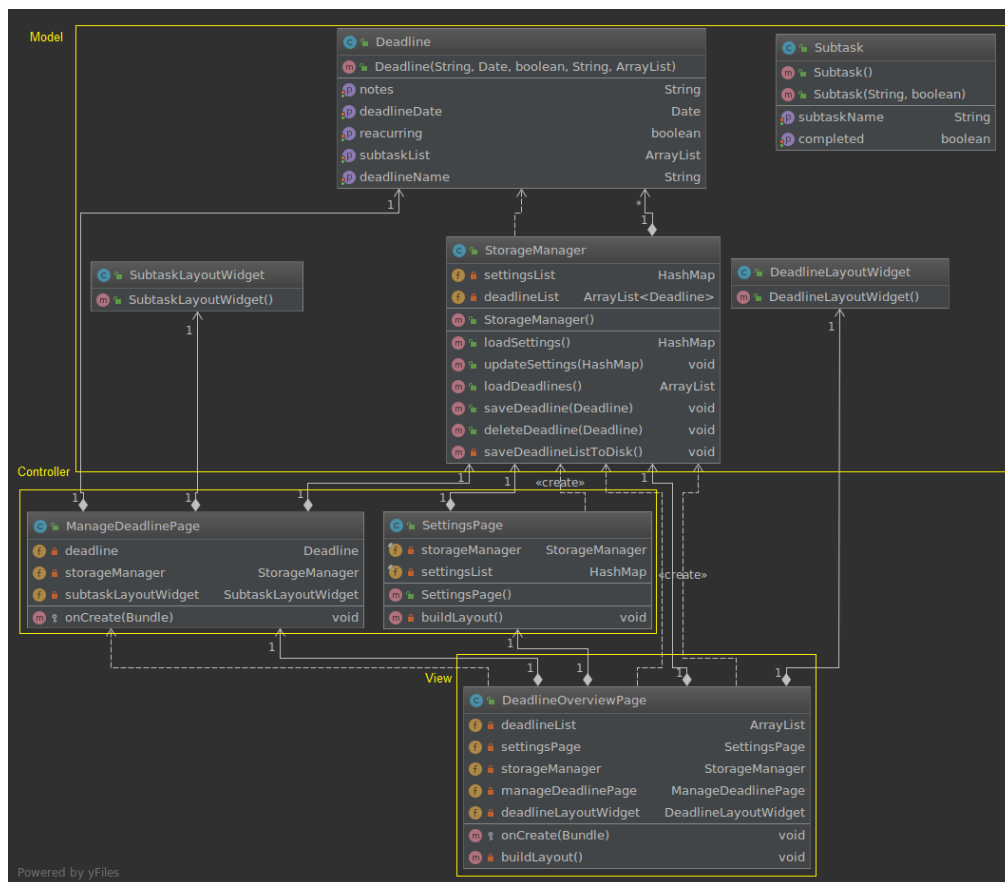

### 4.1 Use-Case Realizations

N.A.

Deminder	Version: <1.0>
Software Architecture Document	Date: 29/11/2018

## 5. Logical View

### 5.1 Overview

### 5.2 Architecturally Significant Design Packages

N.A.

## 6. Process View

N.A.

Deminder	Version: <1.0>
Software Architecture Document	Date: 29/11/2018

## 7. Deployment View

## 8. Implementation View

N.A.

### 8.1 Overview

N.A.

### 8.2 Layers

N.A.

## 9. Data View (optional)

Data is stored on the android phone in .ics format. These files are accessed by the app directly. There is no database used.

## 10. Size and Performance

N.A.

## 11. Quality

N.A.
